Report: Project 4 Part 2 – Facebook Application API in Scala with Security

Students: Chiranjib Sur (UFID : 2531 4396)

Pramit Dutta (UFID : 7513 2433)

Course: COP 5615: Distributed Operating Systems Principles

Tool used for the code: IntelliJ IDEA

System Configuration Snapshot:

System

Processor:	Intel(R) Core(TM) i7-5500U CPU @ 2.40GHz 2.40 GHz
Installed memory (RAM):	16.0 GB
System type:	64-bit Operating System, x64-based processor
Pen and Touch:	Full Windows Touch Support with 10 Touch Points

How to run the code:

Open both the Projects in IntelliJ IDEA.

Start the Server project (named as "project4" folder)

Start the Client project (named as "Project4_1" folder)

Client project will run some scripts and the output will be shown. The Server project is set to default that is "http://localhost:8080"

The details of the findings and analysis is provided in the folder Report.
